Abstract (en)  
[origin: WO2013053906A1] The present invention relates to a timepiece comprising a representation of a non-rectilinear object, said representation particularly consisting of a movable element kinematically connected to a drive mechanism (16). According to the invention, the representation also consists of at least one second movable element, the drive mechanism (16) being arranged such that said movable elements (14a, 14b) each move, simultaneously and in synchronization, between a first and a second end position, and vice versa, said movable elements forming said representation at a first size and at a second size greater than the first, respectively, when said movable elements are in the first and second end positions thereof.
