Abstract (en)
[origin: WO2013053589A1] The invention relates to a method for changing a projection plane (46) upon detection of at least one object, particularly at least one raised object (34), in the area surrounding a vehicle (30). The area surrounding a vehicle is monitored for raised objects (34). The coordinates of a base point (48) of at least one detected raised object (34) and the width thereof are then ascertained, after which the projection plane (46) in front of the at least one detected raised object (34) is optionally raised within a transition region (50) starting from this base point (48).
