Abstract (en)

[origin: WO2013053477A1] The invention relates to a method for producing a screw connection terminal (6, 19, 28), having the following steps: providing a flat metal (1), introducing a conductor insertion opening (2) in the form of a through-opening into a longitudinal lateral surface of the flat metal (1), introducing an eyelet opening (3) into an end face surface (4) of the flat metal (1) by driving apart the material of the flat metal (1) such that the diameter of the eyelet opening (3) is larger than the thickness of the flat metal (1) in the region of the conductor insertion opening (2), and introducing a thread (5) into the eyelet opening (3).
