Abstract (en)  
[origin: EP2767186A1] The present invention is a pump-type ampoule container capable of being refilled. The pump-type container capable of being refilled according to the present invention is a dual container comprising an inner container and an outer container, wherein a discharge portion is fixed to the upper portion of the outer container and the inner container accommodating the contents can be replaced. Therefore, it is possible to replace only the inner container while using the same discharge portion when the contents are exhausted, thereby reducing costs for a user.
