Abstract (en)
A self-cleaning overhead shower comprises a containing chamber, a shutter (3) arranged in the containing chamber (11), a surface cover (6) arranged in the containing chamber (11) and forming a spout (61) and a supporting column (62), a water distribution part (5) arranged in the containing chamber (11) and forming a through hole (52) and one or more cleaning pins (51) positioned in alignment with spout holes of the spout (61), wherein the supporting column (62) of the surface cover (6) extends through the through hole (52) of the water distribution part (5) and is fixed to the shutter (3) in a manner that the surface cover (6) is movable with respect to the water distribution part (5) between an attached position in which the cleaning pin (51) penetrates the spout (61) and a detached position in which the cleaning pin (51) is detached from the spout (61), a spring (4) acting between the shutter (3) and the water distribution part (5) such that the spout (61) of the surface cover (6) is elastically biased in the attached position and a water pressure acting on the shutter (3) moves the shutter (3) together with the spout (61) in the detached position.
