Abstract (en)

A shower comprises a shower head (1) having a water inlet and outlet holes (12), a connecting assembly (2) connected with the shower head (1) and connectable with a water inlet pipe and adapted to transfer water from the inlet pipe to the water inlet of the shower head (1) and to mix the water with air, the rotatable connecting assembly (2) including a tubular external connector having a first end connected to the water inlet of the shower head (1), an internal expansion chamber (213) and a second end, a ball rod (22) connected with the water inlet pipe and with the expansion chamber (232) and forming a through hole and a first air inlet (224) extending through a side wall of the ball rod (22) into the through hole, a tubular water guide rod (23) arranged inside the through hole of the ball rod (22) and forming a Venturi shaped distribution hole and expansion hole and a second air inlet (234) extending through a side wall of the water guide rod (23) into the expansion hole (232) for sucking air in the water flow in the expansion hole, an annular gap (233) defined between the water guide rod (23) and the ball rod (22), wherein the first air inlet (224) connects the annular gap (233) with the outside and the second air inlet (234) connects the annular gap (233) with the expansion hole (232).
