Abstract (en)

[origin: EP2767495A1] The method involves producing a bundle from a sheet of a flat material i.e. paper (1), including two different sections, which form different information leaflets. The sheet is folded in two folding processes. A protruding fold (14) is formed and separated in order to separate the information leaflets from the bundle. The different sections of the sheet are provided with different information in the form of different texts and different graphics before folding, where the sheet is folded parallel folding along parallel folding lines by one of fan folding, coil folding and altar folding. An independent claim is also included for a bundle.
