Abstract (en)

[origin: EP2767640A1] The method involves detecting the presence of a user (100), and triggering rinsing of a urinal after departure of the user (102), where the rinsing of the urinal is carried out systematically and immediately for a short rinsing duration (T1) after the departure of the user. Another rinsing operation of the urinal is carried out (106) for a long rinsing duration (T3) after a predetermined time (T2) when no other user is detected during the predetermined time, where the predetermined time is between 20 and 30 seconds. An independent claim is also included for a device for electronic controlled rinsing of a urinal.
