Abstract (en)

[origin: EP2767652A2] The device has a running rail (2) for fastening a movable associated backup rope at a belt train of a roof. The running rail is formed of a profiled rail (10), and a leg (11) is fastened on a roof. Another leg (12) is contacted with the former leg for finding a trolley. A running surface is arranged at an opening of the running rail when side surfaces of a C-shaped running rail are formed by the legs to form guide surfaces for the trolley. A cable guide eyelet is provided with the backup rope, and comprises a terminal stop.
