Abstract (en)

[origin: EP2767664A2] The device (100) has a strut-side part (110) fastened at a strut profile and brought in connection with a frame-side part (120) by a fixing element e.g. connecting pin, such that a relative position and an alignment of the strut profile relative to a frame part are defined. The strut-side part includes a flexible position holding element i.e. position holding spring, which ensures position holding of the strut-side part during a time limited step of a mounting process. A screw (129) fastens the frame-side part at the frame part. Independent claims are also included for the following: (1) a profile arrangement (2) a method for fitting a frame part.
