Abstract (en)

[origin: EP2767738A1] The hydraulic control arrangement (3) has a hydraulic actuating device (50,52) for each of the clutches (C1,C2), which is fluidically connected with a pressure medium sink. The two actuating devices are connected with a pressure medium source through a working line (42,44) in each case for actuating the associated clutch. A valve assembly (62) is provided, through which the two working lines are brought together in a throttled pressure medium connection. An independent claim is included for a method for pre-filling the working line of a control arrangement of a transmission.
