Abstract (en)  
The coin dispensing device (D) comprises: a main body (6) having an upper wall (61), a disc element (7) mounted on the upper wall (61) such as to be set in rotation (w) about a rotation axis (R) perpendicular to the wall (61), and which is provided with circular through-seatings (71) for receiving corresponding coins, a motor organ (8) for setting the disc element (7) in rotation (w), a coin outlet slot (9) and coin switching means (5) for switching coins towards the slot (9). The coin switching means (5) comprise: at least a curved through-slot (51) made in the upper wall (61); an annular element (52) which bears at least a tooth (54) and which is mounted, with respect to the main body (6), in such a way that the tooth (54) is inserted in the slot (51) and projecting beyond the upper wall (61) and in such a way as to be rotatable with respect to a rotation axis (V) perpendicular to the wall (61) such that the tooth (54) can slide in the slot (51); an elastic organ (58) constrained, at a first end, to an internal wall of the main body (6) and, at a second end, connected to a part of the annular element (52).
