Abstract (en)  
[origin: WO2013056890A1] The invention relates to a machine tool clamping device for clamping a laminar machining tool (12) to a tool holder (14) that is eccentrically movably mounted, comprising at least one clamping unit (16) having at least one movably mounted clamping element (18). According to the invention, the machine tool clamping device comprises at least one slotted link movement unit (20) provided in order to move the clamping element (18) in at least one operating state in order to generate tensile stress in the laminar machining tool (12).
