Abstract (en)
[origin: US2013082052A1] A waste segregation and recycling receptacle which can receive and store different types of recyclabale, biodegradable and non-recyclable waste. The receptacle contains an upright outer open-top vessel, several insertable and removable upright inner open-top vessels, seated within the outer vessel, and a removable top cover with a lid. Flanges along the tops of the inner vessels can rest on the top rims of the side walls of the outer vessel and retain the inner vessels within the outer vessel. The flanges also allow for the retaining and supporting of thin-walled non self supporting collection bags within the inner vessels if required. The outer vessel can be easily lifted and carried for emptying. The receptacle can be free standing or integrated into kitchen units, and its design reduces the odours and leachate normally associated with bio-waste.
