Abstract (en)

[origin: WO2012159218A1] The invention relates to the carriage for a flush sliding door, comprising two chassis (13), at the ends of which support rollers (9, 11) are fastened. The support rollers (9, 11) engage in laterally open rolling tracks (5, 7). In order to enable the carriage to also be inserted into laterally closed rails (1, 3), the chassis (13) can be pivoted on a connecting rod (17) about vertical axes and fixed at a right angle to the connecting rod after being inserted into the rolling tracks (5, 7).
