Abstract (en)
[origin: WO2013056998A1] The invention relates to an operating device for vehicles, wherein the operating device has a three-dimensional main body that can be plastically deformed by hand forces, and sensor surfaces, which can be associated with at least one finger of a hand and the position of which can be changed by the hand forces, are arranged below an outer layer of the main body in order to detect finger actuation movements.
