Abstract (en)
[origin: WO2013056906A1] The invention relates to an electronic control device (28) for controlling at least one rotatably mounted actuator, comprising electronic components such as a device (30) for contactlessly receiving electrical energy and for contactlessly receiving signals, a device (27a) for generating magnetic fields and a common housing (39) that encloses and accommodates the electronic components (27a, 30), the control device (28) being able to rotate and designed to be mounted to or into a component that rotates about a rotational axis (a).
