Abstract (en)

[origin: CA2867482A1] The invention relates to an electronic housing (1) for switching devices, comprising a housing lower part (2) and a housing upper part (3). The invention is characterized in that a guide (7) is formed in the interface region (6) between the housing upper part (3) and the housing lower part (2) such that the housing upper part (3) can be slid onto the housing lower part (2) in the X direction via the guide (7) in a fully automatic process.
