Abstract (en)

[origin: WO2013056721A1] A method for providing data produced in a conference, in which voice signals from participants in the conference are mixed in a conference bridge, comprises provision of a time base that runs concurrently over the duration of the conference and setup of automatic identification of each participant when this participant speaks in the conference. The method also comprises capture of conversation contribution by each speaking participant to a conversation by the participants which is conducted during the conference as speaking time associated with each speaking participant at the conference, association of a time stamp with the speaking time, and production of statistical data by virtue of statistical evaluation of the speaking times of the participants.
