Abstract (en)

Support for maintaining the temperature of cold beverages in glasses and the like comprising a container (1) and a support assembly, where the container has some side walls (1.1) that define a concavity similar to that of a glass, and these side walls (1.1) define an inner chamber in which a coolant (2) is housed, has a vertical longitudinal groove (1.5) that connects a hole (1.4) of base (1.2) of the container with the upper rim of the side walls of the container, while the support assembly consists of a support base (6) and an arm (5) which at its lower end is connected to base (6) and at its upper end is connected to container (1), directly or through a support assembly (7) of container (1).
