Abstract (en)

[origin: EP2769771A1] The pouch (6) has a tip (19) including a duct that passes through a base by extending between a lower opening arranged in a reservoir and an upper opening, where the upper opening of the duct opens to the exterior of the pouch. The tip is provided with a cap (26) arranged to be able to be mounted in the upper opening by closing the communication between the reservoir and the exterior in a sealed manner by the intermediary of the upper opening while still leaving the communication open between the reservoir and a well of the tip by the intermediary of the lower opening of the duct. Independent claims are also included for the following: (1) a method for conditioning a product in the reservoir of a pouch (2) a unit for dispensing a product conditioned in the reservoir of a pouch.
