Abstract (en)

[origin: EP2769946A1] Apparatus for supporting a media stack in a media feeding device comprising, a cam member (1) providing at least one cam surface (22); a support member (2) including a base (4) and a plurality of support surface members (5, 6) mounted on the base (4), each support surface member (5, 6) providing at least one support surface (7, 8), the support surfaces (7, 8) in combination providing a base terrain profile for supporting a stack of media to be fed by a pick up mechanism, at least one of the support surface members (5, 6) being a pivot able arm (6), and at least one of the support surface members (5) being fixed relative to the base (4); wherein at least one pivot able arm member carries a cam follower (11), and the base terrain profile provided by the support surfaces (7, 8) is variable by virtue of the action of said cam follower cooperating with a corresponding cam surface (22) of the cam member (1) during a media feed operation.
