Abstract (en)  
[origin: EP2770104A1] Electrically conductive paper fabric comprises fiber materials, preferably cellulose containing fiber materials and carbon fibers, chemical additives and residual moisture content. The mixing ratio of the specific resistance of the paper fabric is  $10^{-1}$  to  $10^{-6}$   $\sim \Omega$ m. An independent claim is also included for producing the paper fabric, comprising providing a suspension of cellulose containing fiber and water, adding at least one chemical additive, adding the carbon fibers, dewatering the pulp suspension and preparation of electrically conductive paper fabric, and mechanically dewatering and drying the electrically conductive paper fabric.
