Abstract (en)
[origin: EP2770117A2] An electrical swivel working machine (100) includes a lower-part traveling body (1); an upper-part swivelling body (3) mounted on the lower-part traveling body so as to be rotatable relative to the lower-part traveling body; a swivel mechanism (2) supporting the upper-part swivelling body so that the upper-part swivelling body is rotatable relative to the lower-part traveling body; a motor (21) for swiveling the upper-part swivelling body relative to the lower-part traveling body as a drive source of the swivel mechanism; and a swivel control part (32) generating a drive command for driving the motor, wherein the swivel control part performs a slip prevention mode where a swivel operation of the upper-part swivelling body (3) is mild relative to an ordinary swivel mode.
