Abstract (en)

[origin: EP2770134A1] The profile system has a base profile strip (1) which is connected with a connection profile strip over connecting units (4), where the connecting units allow a displacement of the connection profile strip in a plane parallel to an axle stub (1.2) of the base profile strip to compensate a facade plane offset. The base profile strip manufactures a plug- or clamp connection with the connection profile strip over the connecting units. The base profile strip is made from metal, particularly aluminum, or plastic.
