Abstract (en)

The lighting and/or signaling unit has a first light source (6), a second light source (8), and a lens comprising an input diopter (2) and an output diopter (3). The lens is configured to enable an emission of a first output light beam by the output diopter on reception of a first input light flux, generated by the first light source, by the input diopter. The output diopter comprises a first portion (12) matched more particularly to the first light source and a second portion (13) matched more particularly to the second light source. The lens is configured to enable an emission of a second output light beam by the output diopter (3) on reception of a second input light flux, generated by the second light source (8), by the input diopter (2).

Abstract (fr)

L'invention concerne une unité d'éclairage et/ou de signalisation comprenant une paire de sources lumineuses (6, 8) coopérant toutes deux avec un élément optique de sorte à former deux faisceaux lumineux en sortie, selon la fonction d'éclairage souhaitée. Le dioptre de sortie (3), notamment de forme en portions elliptiques (12, 13), est adapté pour accommoder la génération de faisceaux à partir de deux sources (6, 8) espacées. Application à l'industrie automobile.
