Abstract (en)

[origin: EP2770247A2] The motor vehicle lamp has a light source (10) and a concave mirror reflector (12) having a focal length, where the light source is adapted to light incident from one direction on the mirror reflector to reflect in another direction to generate non-compliant light distribution. A flat radiator is provided, which is defined by the outgoing light incident on the reflector in one direction, where a light-emitting surface (16) is greater than half of the square of the focal length. The emitting surface extends in a direction perpendicular to the main emission direction of the reflector.
