Abstract (en)
[origin: EP2770485A1] The system (100) has a goods depositing device (120) comprising a goods detecting device (140) designed to register goods, and a goods dispensing device (160). The dispensing device transfers the registered goods from the depositing device and conveys the goods along conveying lines in a transport direction (T). The dispensing device has a receiving device (162) and fixes a goods separator (210-1) to the receiving device to divide the lines into a post-detection zone (166) for post-detecting the goods and a packing zone (168) for removing the goods. Independent claims are also included for the following: (1) a method for operating a cashier system (2) a computer program for operating a cashier system (3) a machine-readable storage medium comprising machine-readable program code for executing a method for operating a cashier system.
