Abstract (en)

[origin: EP2770497A2] The instrument (10) has lateral side walls (30) and front walls (40) that are divided on an inside into multiple resonance chambers (80a-80e) by vertical partition walls (50) where the resonance chambers are defined against each other. A resonator (20) is provided with a continuous cover plate (60). The cover plate for each resonant cavity comprises sound holes (70). Recesses are arranged on a top of the cover plate for receiving locating pins (130) for sound bars where resonance chambers are associated with the sound holes.
