Abstract (en)

[origin: WO2013061345A1] The present invention is a bearing structure (1) for a supporting surface (50), comprising: bearing means (6a, 6b, 6c, 6d) suited to be arranged on the ground on two or more contact areas (4a, 4b, 4c, 4d); connection means (15) suited to connect the bearing means (6a, 6b, 6c, 6d) to the supporting surface (50) in two or more connection areas; means for moving said connection means (15) suited to allow them to be positioned in a first position corresponding to a condition of usage of the supporting surface (50) and in a second position corresponding to a condition in which the supporting surface (50) is not in use. Said structure comprises adaptation means suited to allow said bearing structure (1) to adapt to different dimensions of the supporting surface (50). The invention also concerns a furniture element comprising a supporting surface (50) and a bearing structure (1) for the supporting surface (50).
