Abstract (en)

[origin: WO2013060468A1] The invention relates to a device for producing a fiber composite component and to a guide device (60) for guiding a plurality of fibers in order to produce a fiber composite component, comprising a guiding element (26) having passages (34) for the fibers that are spaced approximately transversely to a direction of motion of the fibers and an adjusting device for adjusting guiding elements (26).
