Abstract (en)

[origin: WO2013060566A1] The invention relates to a container for packaging a first fluid (11) and a second fluid (12), said container being provided with: a breakable membrane (22) used to separate the first and second fluids, and a striker (23) which can strike the membrane in such a way as to allow the first and second fluids to mix. According to the invention, the container comprises: a first element (1) which can receive the first fluid, having a body comprising a first end (12) provided with a dispenser (3) and a second end (13) forming an opening that is intended to receive the first fluid; and a second element (2) which can receive the second fluid, having a body comprising a first end forming an opening that is intended to receive the second fluid and a second end which is closed by means of a flexible wall (24). The aforementioned second element (2) can be received in the second end (13) of the first element, thereby sealing said second end of the first element, and the second element is provided with a striker (23) secured to the flexible wall (24), thus making the striker mobile.
