Abstract (en)  
[origin: WO2013060586A1] The invention relates to a cooling apparatus for cooling products, wherein the products to be cooled are stacked on pallets (8) and these product stacks (7) can be subjected to the action of a coolant stream (6), comprising at least one station (5) for placing at least one product stack (7) and at least one coolant guide system (10) by means of which the coolant stream (6) can be routed through the product stack (7), wherein the coolant guide system (10) has at least one air cushion element (9) which can be inflated by means of the coolant stream in such a way that it bears against at least one sub-area of the product stack.
