Abstract (en)

[origin: WO2013060323A1] The invention relates to a sensor system for sensing the environment of a motor vehicle having an evaluation unit, wherein a grid-based environmental model is calculated and at least one discrete value is assigned to each grid cell. Discretisation is carried out by comparison of environmental data and at least one threshold value. At least one discrete value of the grid is preferably transmitted via a data transmission system in a vehicle to an evaluation or control unit.
