Abstract (en)  
[origin: WO2013061714A1] An electric wire (1) includes an electric conductor part, and an insulating cover part (11) that covers the electric conductor part. A plurality of connection destination circuit information parts (C) indicating a connection destination are formed on the insulating cover part at equal intervals. A later fitting circuit information part (A) indicating a later fitting circuit is formed between the connection destination circuit information parts on the insulating cover part. The later fitting circuit information part is colored by ink which is lower than that of the connection destination circuit information parts in at least one of an adhesive property, a weather resistance, a heat resistance and a chemical resistance.
