Abstract (en)

[origin: WO2013060820A1] The invention relates to a cutting chamber (10) for an electrical cutting apparatus, intended for enclosing a cutting fluid, including two contact devices (12a, 12b) of which at least one can be moved in translation in a longitudinal direction (47) with respect to a frame (24) between a closed position and an open position of said devices, and including a tube (28) for electrically insulating and centering said devices (12a, 12b) with respect to each other, which tube is stationary with respect to said frame (24) and which extends longitudinally around said devices in such a manner as to delimit a space (42) in which the latter devices are accommodated, said tube (28) comprising a through hole (46) formed in a longitudinal wall of the tube and opening radially toward the outside of said tube.
