Abstract (en)

A lipstick case lipstick body lift seat anti-slipped structure includes a lipstick case (20), an outer tube (30), a lift seat (40) with an opening facing upward, and a lipstick body (50). A plurality of anti-slipped blocking grooves (221) is formed on an upwardly inclined side of each of the two inclined guiding grooves (22). The outer tube (30) is sleeved on an outer side of the small diameter guiding tube (21), and a spiral guiding groove (31) is disposed on an inner wall of the outer tube (30) concavely. The lipstick body (50) is sleeved in the lift seat (40). Two lift guiding columns (41) are disposed on an outer wall of the lift seat (40) protrudingly for engaging with the inclined guiding grooves (22) correspondingly and pressing into the spiral guiding groove (31). An anti-slipped blocking portion (411) is protrudingly disposed on an outer diameter of each of the lift guiding columns (31) corresponding to the anti-slipped blocking grooves (221).
