Abstract (en)

[origin: EP2772588A1] The gabion (2) has a gridded bottom (4) that extends primarily in a plane, and a set of side faces (6-9) delimiting a container. The gridded bottom is formed of a wire (28) extending in a direction (X) parallel to and intersected with another wire (30). The former wire is spaced from the latter wire in a direction (Y) so as to form a set of carrying lines (32, 34). Each carrying line or two non-carrier lines is located immediately on the right and the left of each carrying line that differ visually from other non-carrier lines of the bottom.
