Abstract (en)
A pivot door assembly is provided comprising a stationary frame, an upper adjusting block located on an upper end of the stationary frame and having a slot, a movable frame having detachable hinge bases including an upper hinge base and a lower hinge base, each of the hinge bases being provided with a hinge shaft for connecting with a pivot door, and a first screw, wherein a first screw hole is disposed on the upper hinge base, a second screw hole is disposed on an upper end of the movable frame, and when a relative position of the stationary frame and the movable frame is determined, the first screw can pass through the slot and the first screw hole to connect into the second screw hole.
