Abstract (en)
There is provided a cooling system, comprising: a portable cooling device comprising a fluid, a reactor containing a sorbent capable of sorption and desorption the fluid and a chamber for condensation and evaporation of the fluid, said reactor and said chamber being connected such that the fluid may flow between them; and an openable cooling box comprising insulating walls forming an interior space for cooling, said cooling box being adapted to receive the cooling device such that, in a closed configuration of the cooling box, heat may be transferred from the interior space to the chamber and from the reactor to an exterior cooling source, such as ambient air.
