Abstract (en)

Audio system and method for operating an audio system for transmitting wireless audio streams to a hearing system. The audio system comprises a communication unit and a radio system comprising a plurality of stationary transmitter units for transmitting at least a first audio stream with first audio identification data indicative of the first audio stream and a second audio stream with second audio identification data indicative of the second audio stream, the plurality of stationary transmitter units including a first transmitter unit and a second transmitter unit. The method comprises receiving a request indicative of at least one audio track; determining configuration data for the hearing system based on the request indicative of at least one audio track; and transmitting the configuration data to the hearing system for allowing the hearing system to receive at least one audio stream representative of the audio track indicated in the request.
