Abstract (en)
[origin: WO2013064352A1] A machine for making smoking articles that include filters (24) such as filter cigarettes, has fabrication stations configured in a production line to perform sequential steps in their manufacture, and an inspection station to identify those of the smoking articles that are to be rejected as a result of not meeting a quality control criterion. A filter removal device (31) is arranged on the production line to remove the filters (24) from the smoking articles identified for rejection at the inspection station.
