Abstract (en)

[origin: WO2013064384A1] The invention relates to a concept for sealing a bearing component (110; 110a; 110b) for a bearing (100), which bearing component has a fastening possibility (120) for fastening to a component (130) to be supported, wherein the bearing component (110; 110a; 110b) or the component (130) to be supported has a recess (115, 117) for a seal (119), in such a way that the bearing component (110; 110a; 110b) can be connected to the component (130) to be supported at least a watertight manner. The concept also provides for an underwater power plant having a bearing component (110; 110a; 110b) or a bearing (100) and a drive shaft (130), which are mechanically coupled to one another and between which a seal (119) is located for sealing.
