Abstract (en)

[origin: WO2013064483A1] The invention relates to an electrical conduction member comprising an electrically conductive bar (1) and an electrical wire (10) that is covered with an electrically insulating sheath (12) and has an exposed end (13) that is welded onto the bar. Said electrical conduction member is characterized in that a tab (14) that is uniform with the bar projects from one surface of said bar. Said electrical conduction member is characterized in that an unexposed portion of the wire is attached on the tab by means of a sleeve (20) enclosing the tab and said portion. The invention also relates to a method for manufacturing such an electrical conduction member.
