Abstract (en)
[origin: EP2774500A1] A helmet is provided that can be ventilated without any decrease in helmet-shell strength. The helmet comprises a helmet shell 3 and an impact-absorbing member 4 disposed along the inner surface of the helmet shell 3. The helmet shell 3 has paired right-hand and left-hand cheek-covering portions 9, and a side hemming member 22 is attached to a lower edge 9a of the cheek-covering portion 9. The cheek-covering portion 9 has an upwardly cut-out portion 50 formed on its lower-end side, and the lower edge 9a of the cheek-covering portion 9 is slanted upward in peak form from both sides toward the center in front-back direction. The side hemming member 22 has a wide portion 52 formed so as to swell upward in peak form for obtaining a wide vertical width in correspondence with the cut-out portion 50, and the wide portion 52 has an air ejection hole 55.
