Abstract (en)
[origin: EP2774661A2] The device (100) has a base body (101) mounted on a ski, and a mounting lever (110) provided with a coupling element (113) for coupling to a ski boot, where the mounting lever is placed on the base body and rotatable around a rotation axis (114). Another mounting lever (120) includes another coupling element (123) for coupling to the ski boot. A spring (130) is coupled to the base body and to the former mounting lever such that a torque (M1) is produced at the rotation axis to bias the former coupling element toward the latter coupling element with a biasing force (FV1). Independent claims are also included for the following: (1) a crampon for a ski (2) a ski binding.
