Abstract (en)
[origin: EP2774725A1] The device has pressing jaws (1, 2) adjustable from closed position into open position and compressed with a receiving element (7). Axle of the receiving element lies under an angle of 90 degrees to a transverse center plane of the pressing jaws. The pressing jaws comprise recesses (5, 6) at end portions (33, 34), and the receiving element is moved into the closed position of the press jaws. The end portions are inclined to a residual part of the pressing jaws. The end portions are raised up over broader side of the pressing jaws.
