Abstract (en)

The method involves guiding the yarn (2) between the yarn supply and the target coil in a running direction (L) by a yarn cleaner (9) to secure the yarn quality. The yarn defect is cut out upon detection of the yarn defect and the yarn is then spliced. The yarn is first withdrawn against the direction and then cut upon detection of the yarn defect. A pulling force is exerted on the yarn for withdrawal of the yarn upon detection of the yarn defect between the yarn supply and the yarn cleaner with a return device (4). An independent claim is included for a winding machine with a cutting station.

Abstract (de)

In der Spulstation einer Spulmaschine wird Garn (2) mit einem Garnreiniger (9) auf Fehlstellen geprüft. Bei Detektion einer Fehlstelle wird das Garn (2) zunächst durch den Garneiniger (9) zurückgezogen, wobei das Garn nochmals genauer geprüft wird. Sodann wird die Fehlstelle am zurückgezogenen Garn herausgeschnitten, worauf das Garn (2) wieder verspleist wird.
