Abstract (en)

[origin: EP2775047A2] The fitting (1) has an overflow body (2) comprising a water supply. A cap-shaped rotatable handle (10) operates a drain valve of a bath tub, and a clamping body (15) comprises an inlet channel (15.5). The handle comprises a driver shaft (13) extending into the overflow body. The shaft or the handle is supported in an axially movable manner such that the handle is moved from a position to another position. The handle forms a water intake defining increased overflow level in the former position. The handle limits another water intake defining deep overflow level in the latter position.
