Abstract (en)

[origin: EP2775063A1] The arrangement has brace parts (12, 14, 16) arranged at a distance to each other at a carrier (18). End sections of the brace parts extend in different directions of the carrier such that one of the end sections line in an imaginary plane that extends parallel to another imaginary plane, where another end section lies at the latter imaginary plane. The brace parts are made from corrosion-resistant material, and a fastening element (24) extending between the imaginary planes is arranged at the carrier. The brace parts are designed with U-shaped outer contour. Independent claims are also included for the following: (1) a prefabricated concrete part (2) a method for manufacturing a prefabricated concrete part.
